

Step 1: Login to Google cloud and open dashboard

STEP 2: Create a New GCP Project

Project Name -> CCE2

Project ID -> cce2-494609 (Auto Generated)

Parent Resource: No organisation

STEP 3: Create an App Engine Application

Navigate to App Engine → Dashboard → Create App. Select the deployment region. The region cannot be changed after creation, so choose wisely based on your target user location.

- Region Selected: asia-south1 (Mumbai, India)
- Identity and API Access: Default App Engine service account used

Click Next. GCP provisions the App Engine infrastructure and creates the default service. This process takes about 30-60 seconds.

STEP 4: App Engine Application Created Successfully

After clicking Next, the App Engine application is provisioned. The "Get started" page confirms success with a green banner: "Your App Engine application has been created." The page shows:

- Language: Python
- Environment: Standard
- Deployment method: Google Cloud SDK (gcloud CLI)

Step 5: mkdir building-an-app && cd building-an-app

Step 6: cd ..

Step 7: mkdir app-python && cd app-python

Step 8: git clone <https://github.com/GoogleCloudPlatform/python-docs-samples>

Step 9: ls

Step 10: cd python-docs-samples

Step 11: ls

Step 12: cd appengine

Step 13: ls

Step 14: cd standard_python3

Step 15: ls

Step 16: cd building-an-app

Step 17: ls

Step 18: `cd building-an-app-1`

Step 19: `ls`

Step 20: `cd static`

Step 21: `ls`

Step 22: `cd ..`

Step 23: `ls`

Step 24: `cd templates`

Step 25: `ls`

Step 26: `touch index.html`

Step 27: `cd ..`

Step 28: `gcloud app deploy`

Step 29: select Y

Step 30: `gcloud app browse`
